

Closure of the Riverside entrance at Christchurch Hospital

– from 15 October

As the site works start for Christchurch Hospital's new Acute Services building, it is necessary to close the Riverside entrance of the hospital from Wednesday 15 October 2014.

The Riverside entrance is at the rear of Christchurch Hospital - off Rolleston Avenue.

This closure is necessary for infection control and safety reasons as construction traffic begins to come on site.

Anyone who would normally use the Riverside entrance is asked to use the main entrance of the hospital, off Riccarton Avenue. There will be no access for private vehicles via the Rolleston bridge. This will be for pedestrians only.

Patients should check their appointment letters carefully and allow more time to reach Christchurch Hospital, Christchurch Women's and Hagley Outpatients clinics.

From 28 October, the main entrance will be a drop-off zone only, and on-site public parking will be limited to mobility parking spaces.

More information on the new Park & Ride scheme, drop-off zone and other transport options are available at cdhb.health.nz/parking
